

Advancing the Use of Population-Based National Survey Datasets Including Data on CAM Use in Children

2012 National Health Interview Survey (NHIS)
Child Complementary and Alternative Medicine (CAM) Supplement

Christina Bethell, PhD, MPH, MBA Barbara Stussman, IRCIMH 2014 Congress May 16, 2014 Miami, Florida

www.childhealthdata.org

Session Goals

- 1. **Inspire you** to access and integrate data from the NHIS Child CAM Supplement to advance child well-being
- 2. **Empower you** to operate the "Child Health Data" interactive query to access data points, graphs, tables and comparisons
- 3. **Discover** at least one new idea for using the NHIS CAM Supplement in existing partnerships in your professional area
- 4. **Learn from you** so that we can further optimize national data and resources to address your priorities

Why We Need Data!

- Lay the groundwork for effective action
 - Establish common definitions and meanings
 - Check assumptions underlying improvement and needs assessment efforts
- Document needs and system performance
- Inform and activate partnerships & make creating impactful "1 pagers" quick and easy
- Educate program leaders and policymakers
- Use to write grants and conduct research

National MCH Data Resource Center (DRC)

- Provide <u>centralized</u>, <u>user-friendly</u>, <u>interactive</u> access to standardized national, regional and state-level findings from national surveys on child and adolescent health and well-being.
- 2) Build shared knowledge, capacity, and inspiration for using data to stimulate and inform system change locally and nationally—especially among state health agency leaders and staff, family advocates and policy leaders.

Welcome to the Data Resource Center for Child & Adolescent Health!

Welcome to the newly redesigned DRC website. Take a tour of the site and give us your feedback.

The mission of the Data Resource Center (DRC) is to take the voices of parents, gathered through the National Survey of Children's Health (NSCH) and the National Survey of Children with Special Health Care Needs (NS-CSHCN), and share the results through this online resource so they can be used by researchers, policymakers, family advocates and consumers to promote a higher quality health careeeee system for children, youth and families. **Learn more about the DRC*

DRC Highlights

How to Use This Site

The National Health Interview Survey (NHIS) Child Complementary and Alternative Medicine (CAM) Supplement

The Child CAM Supplement is one of the NHIS Supplements and collects information about nonconventional health services, products, and practices commonly used in the United States. NHIS is the principal source of information on the health of the civilian non-institutionalized household population of the United States. One child age 0-17 years from each family was randomly selected for the Sample Child Core questionnaire. Additional information about this "sample child" and other family members is collected with the Family Core questionnaire.

The Data Resource Center takes the results from the NHIS Child CAM Supplement, Sample Child and Family Cores and makes them easily accessible to parents, researchers, community health providers and anyone interested in child health and child CAM use data. Estimates on this site are nationally representative. National data can be further refined to assess differences by the US region, race/ethnicity, income, child's health and condition status and a variety of other important demographic and health status characteristics. ▶ Read more about the NHIS and Child CAM Supplement

Child Complementary and Alternative Medicine (CAM) Supplement

2012 National Health Interview Survey (NHIS)

Guide to Topics & Questions Asked

The NHIS is a computer assisted personal household interview of all child and adult family members in selected households. Using a multi-stage area probability sampling design, the NHIS is conducted continuously through each year (since 1957). The 2012 NHIS consists of both a Core questionnaire and Supplements, including the Child CAM Supplement, which was also conducted in the 2007 NHIS. One child from each family is randomly selected to be the Sample Child (S.C.), and an adult knowledgeable about the child's health is administered the full Sample Child Core and Child CAM Supplement.

This guide describes the topics and questions asked in the 2012 NHIS Child CAM Supplement. Note that all questions are asked only of children age 4-17. Since the NHIS Child CAM Supplement can be linked to all other NHIS data files and to future year versions of the Medical Expenditures Panel Survey (MEPS), many other variables are possible to include in analyses of the Child CAM Supplement. Further information regarding this will be provided elsewhere on the Data Resource Center for Child and Adolescent Health website (www.childhealthdata.org).

*Denotes that survey item is new to the 2011/12 NHIS Child CAM Supplement compared to the 2007.

COMPLEMENTARY AND ALTERNATIVE MEDICINE (CAM) USE

NOTE: Question IDs (green) consist of two codes separated with "_". For instance, for CCO_USE, "CCO" refers to the *CAM modality code* (brown) of chiropractic or osteopathic manipulation and "USE" represents the *question code* asking "Has a child EVER used chiropractic or osteopathic manipulation". To complete the question ID, replace "XXXX" with the CAM modality code (e.g. CCO_ for chiropractic or osteopathic manipulation or _NAH for Native American Healer or Medicine Man).

Abbreviation: S.C. - Sample child

Practitioner-Based Therapies

- Has [S.C. name] EVER used any of these therapies for [his/her] health? (XXX_USE)*
 - 1. Chiropractor or osteopathic manipulation (CCO)
 - 2. Massage (CMS)
 - 3. Acupuncture (CAC)
 - 4. Energy Healing Therapy (CEH)
 - 5. Naturopathy (CNT)
 - Hypnosis (CHY)

How to Use Data Effectively

When used effectively, data on children's health can be a powerful tool to educate stakeholders, inform decision makers, and motivate and track improvement of children's health care delivery. Accomplishing these goals requires strategic communication of data results. The information and examples below will help users identify successful strategies for sharing findings and using data effectively from the NSCH and NS-CSHCN. Please also see our Examples of Data Use.

Communication of Data Results

Making National Survey Data Come Alive. Communication of data is essential to engaging all audiences. For many stakeholders, data can be overwhelming and can lead to a lack of engagement or tuning out. To make data come alive, communicate data to your audience by grounding data in real life, easy to understand examples and scenarios.

Using Data to Increase the Impact of Communications. A communications expert shares five rules for selecting and using data facts to develop a powerful message for your targeted audience.

How to Translate Percentages into Numbers of Children. Reporting the estimated number of children with a specific characteristic is often an effective communication tool. This worksheet guides data users through the process of converting percentages into the numbers of children that are represented.

Putting Your Data Findings into Words. How does caring for a child with special health needs affect the work life of family members? A "Telling the Story" example from a family leadership conference in Washington State.

Understanding Research: Top Ten Tips for Advocates and Policymakers. How can you tell if a research study is one you can trust? This checklist helps family and state leaders to critically evaluate research – and use it effectively to inform policy decisions.
